

Healthcare workforce readiness — *finally legible.*

One screen tells you who can start, who can practice, who can bill — and what only a named human can decide.

Rōvn, Inc. · Delaware C-Corp passport.rovn.to/readiness **Live in production · 2026-05-25** Pre-launch · HIPAA-aligned · BAA available

WHY THIS EXISTS

Credentialing coordinators don't lose deals to *bad providers*. They lose them to *unanswered questions*.

- 1 The morning scramble.** Who can start this week? Who is blocked? Eight tabs, three spreadsheets, two CVO logins, one Slack thread — and still no clean answer.
- 2 The 90-day cliff.** A license, a DEA, a CAQH attestation expires. Nobody sees it until it blocks billing. Revenue stops before the email gets sent.
- 3 Source-of-truth blur.** Symplr says one thing, the payer portal another, Excel a third. The committee asks "is she clear?" and nobody can answer in under twenty minutes.
- 4 Audit dread.** JCAHO PSV, CMS recoupment, state board — the evidence exists across five systems. Building the packet takes weeks. The chain is unprovable.
- 5 Tool fatigue.** You don't need another EHR, another ATS, another credentialing committee. You need the answers your existing systems already contain — just legible, by 8 a.m.
- 6 The cost.** Industry average: 78 days to credential a direct-hire RN. Every day = ~\$1,400 in lost billable productivity per provider.

WHAT EVERY CREDENTIALING DIRECTOR NEEDS ANSWERED BEFORE 8 A.M.

Six questions. *One screen.*

Rōvn Readiness is built around the six questions that govern your roster every morning. Every other surface on the platform exists to answer one of them.

- Clear to start

Who can begin work this week?

- Clear to practice

Who can deliver care in scope?

- Clear to bill

Who generates billable claims?

- Expiring soon

What renews in $\leq 7, 30, 90$ days?

- Rōvn surveyed

What is the AI working on right now?

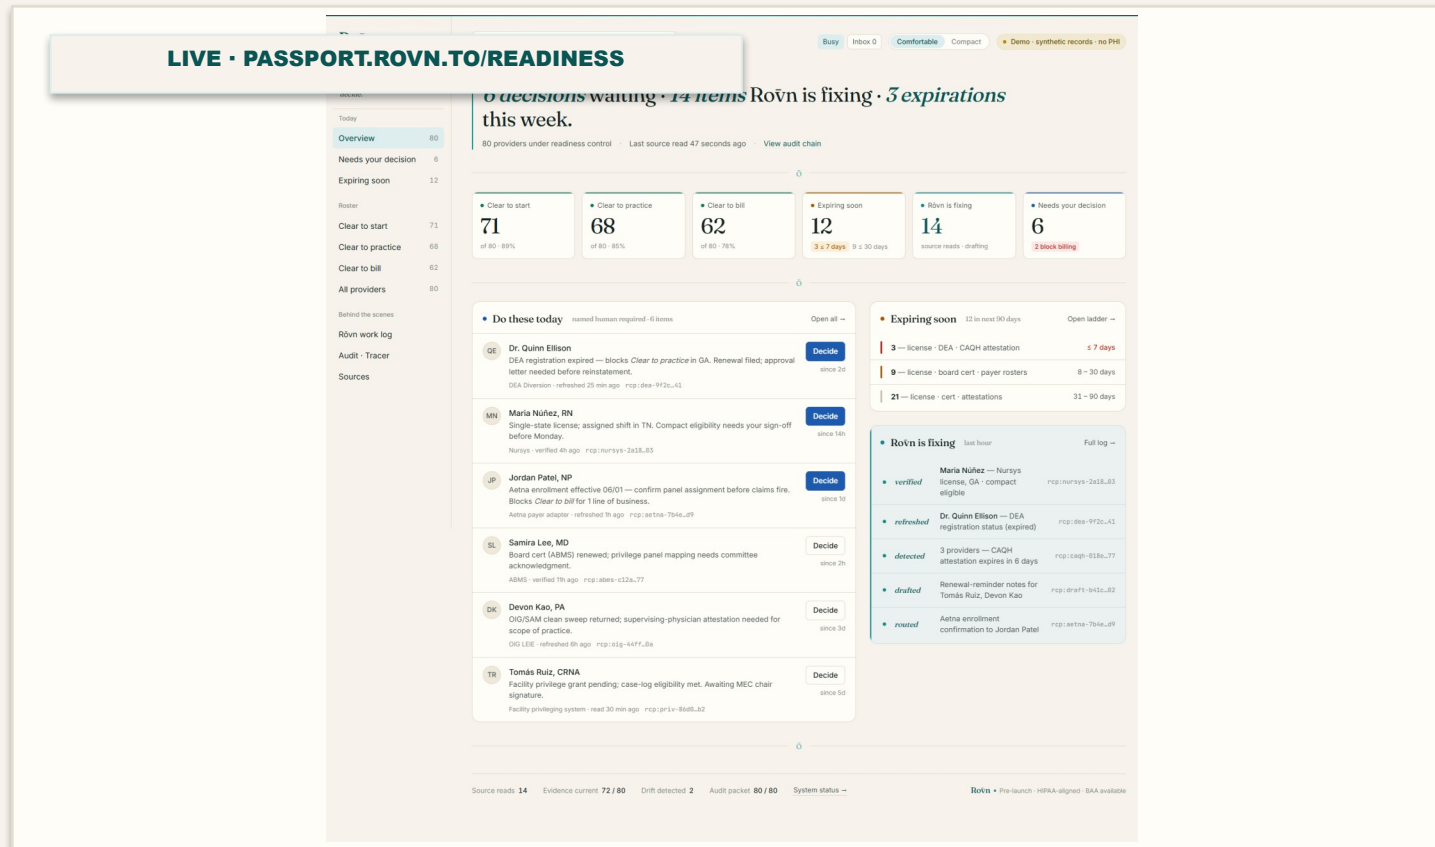

- Needs your decision

What only a named human can decide?

Three Clear-To states are kept separate, on purpose. **Start, Practice, Bill** never collapse — because a single provider can be clear for one and blocked on another, and the operator needs that distinction visible at a glance.

OPERATOR COMMAND SURFACE

One scan. *Eight seconds.* Then back to work.

1 Operator-neutral hero
Three counts, one sentence: decisions waiting · items Rōvn surveyed · expirations this week.

2 Six-question summary
Start · Practice · Bill counts side-by-side. Expiring · Rōvn surveyed · Decide right beside them.

3 Do these today
Six rows, max. Named human required. Every row carries source + freshness + receipt inline.

4 Rōvn work log
Calm teal lane: verified · refreshed · detected · drafted · routed. Visible, never loud.

• Wired to your readiness data
Same screen, your numbers. Populated live from your roster once the BAA is signed.

SOURCE SYSTEMS PROVE THE FACTS

14 adapters. *Honest labels.* No invisible AI.

LIVE · PASSPORT.ROVN.TO/READINESS/SOURCES

Roṽn READINESS · SOURCES

CONNECTED SOURCES · WHAT PROVES WHAT

Source systems prove the facts. *Here's what Roṽn is reading from.*

Every Clear-to-Start, Clear-to-Practice, and Clear-to-Bill fact traces back to one of these source rails. Live = production API, signed receipts; Sandbox = configured but staging credentials; Configured = transport-ready, awaiting first read; Manual review = human PSV when automation isn't live. Stale flags fire when last read is older than the source's freshness window.

Live 6 production receipts	Sandbox 2 staging credentials	Configured 3 transport ready	Manual review 2 human PSV until live	Stale / offline 1 needs operator
---	--	---	---	---

All (14) Live Sandbox Configured Manual review Stale Identity / sanctions License / DEA Payer enrollment

NPDB · QRXS LIVE

Practitioner data bank — adverse actions, malpractice, sanctions

Coverage	1 federal	Reads last 7d	182
Last read	2 min ago	Auth	QRXS / IP-allowListed
Tier produced	Verified	Freshness window	24h

Permissible-purpose attestation required per query. Outbound IP 16.59.215.145 authorized. Test read →

Nursys · e-Notify v3.1.5 LIVE

RN/LPN/APRN licensure · 51 jurisdictions · continuous monitoring

Coverage	1 federal	Reads last 7d	88
----------	-----------	---------------	----

Every Clear-To fact traces back to a source rail. Each adapter shows its honest status: Live, Sandbox, Configured, Manual review, or Stale. No silent downgrades.

- 1 Live · 6 adapters · signed receipts since 2026-05-25
NPDB, Nursys (51 states), DEA, OIG/LEIE, SAM.gov, Aetna — production reads, every fact receipt-bound and hash-linked.
- 2 Sandbox · 2 adapters
Persona, Checkr — staging credentials, awaiting production keys. Surfaced as blockers, not hidden.
- 3 Configured / Manual / Stale
NPPES, BCBS, Cigna/Humana/UHC configured. FSMB PDC + ABMS run as human PSV. Stale = needs operator action.

REPLAYABLE EVIDENCE

Every fact, *hash-linked*. JCAHO-ready by default.

LIVE · PASSPORT.ROVN.TO/READINESS/TRACER
Rōvn **READINESS** · TRACER

AUDIT · TRACER CHAIN

Every fact that touched Readiness — *replayable*, sourced, timestamped.

Every action that changes Start, Practice, or Bill writes a receipt. Every receipt links to the prior receipt by hash. The chain is replayable on demand for JCAHO PSV, CMS recoupment defense, or state board audits — and it's the same evidence Rōvn's Readiness scores read from.

- 1
Chain integrity, verified
 Every receipt links to the prior receipt by SHA-256. Blocks signed in groups, stored S3 Object Lock · WORM · 7-year retention.
- 2
Four-tier depth labels
 Attested · Processed · Verified · Approved. No fact ever drops a tier. Auditors replay any decision and see which tier produced it.
- 3
Export packs
 One click: CMS recoupment defense pack, JCAHO PSV evidence pack, block replay. Receipts ready for counsel, not coordinator-built.

DOCTRINE — LOCKED, PROCUREMENT-SAFE

Rōvn reads. Source systems prove. *Humans decide.*

● Rōvn does

Reads from your credentialing, payer, and monitoring systems via signed, receipt-bound adapters.

Synthesizes Clear-to-Start, Clear-to-Practice, Clear-to-Bill from the underlying facts.

Detects drift — expirations, sanctions, payer terminations — before they block billing.

Drafts the next action: renewal reminders, committee packets, audit exports.

Prioritizes what needs a named human, with receipts attached.

● Rōvn never does

Never hires, rejects, or credentials a provider. The committee owns those decisions.

Never privileges anyone or signs MEC actions on behalf of a human.

Never declares billable — only synthesizes what your source systems already say.

Never files payer enrollment, NPDB queries, or FCRA notices on its own.

Never replaces your CVO, ATS, EHR, or credentialing committee.

Every regulated decision carries a named human, a typed reason, and an audit receipt. The line does not move.

The doctrine is the moat — procurement, legal, and the credentialing committee.

DAILY-USE DESIGN

Calm at 8:00 a.m. Still calm at 2:30 p.m.

1 No colored row fills
Color appears only on dots, thin rails, and primary action buttons. Red is reserved for real blockers.

2 Density toggle
Operators can flip Comfortable ↔ Compact per their workflow. Setting persists.

3 Evidence quiet, not hidden
Source + freshness + receipt on every row, in muted mono. Auditable in two clicks.

4 Inbox zero is a small win
When nothing waits on you, the page says so. Rōvn is still reading sources in the background.

Operator feedback that drove the redesign: "very bad on the eyes for daily use." Now: tolerable for the whole shift.

WHERE WE ARE, HONESTLY

Built on the HIPAA-aligned chassis your *General Counsel* wants to see.

<p>Infra AWS ECS Fargate</p> <p>BAA executed · HIPAA-eligible architecture · 7-yr S3 Object Lock</p>	<p>AI vendor Anthropic Claude</p> <p>BAA executed under Rōvn, Inc. · ZDR-eligible advisor path</p>	<p>SOC 2 Type I · in progress</p> <p>Drata · target Q3 2026 · Type II target Q3 2027</p>	<p>PHI Minimized by design</p> <p>Only credential metadata moves through the AI gateway</p>
---	---	---	--

Sub-processor BAAs executed

AWS · Anthropic · Persona · Checkr · WorkOS.

Audit posture

Hash-chained receipts · S3 Object Lock WORM · 7-year retention · replayable on demand for JCAHO PSV and CMS recoupment defense.

What we never say

Not HIPAA-certified (no authority issues a HIPAA certification). Not SOC 2 certified yet. Not NCQA CVO certified. Not Joint Commission validated. We *are* HIPAA-aligned, BAA-available, and audit-ready.

PARTNERSHIP CADENCE · EARN-THE-PAID-PILOT

Design partner first. *Paid pilot next.* Both on your roster.

DESIGN PARTNER COHORT

Design partner

Free

launch cohort · co-build

- Full Readiness platform on your roster
- 2 source adapters wired live (e.g. Nursys + your payer)
- Tracer + Sources visibility
- Direct Slack channel with the founder
- Co-design influence on the roadmap
- Cohort of 5 · selecting now

Paid pilot

90 days

when design-partner outcomes prove the case

- Operational rollout on your full roster
- Additional source adapters as your stack needs
- JCAHO PSV evidence pack on demand
- CMS recoupment defense pack on demand
- Standard support SLA
- Commercial terms quoted at pilot kickoff

Production

Annual

post-pilot, on a renewable agreement

- Continued operation across your roster
- Full 14-adapter source coverage as available
- Custom payer adapters on request
- Premium support SLA
- Quarterly business reviews
- Pricing earned through pilot data, never guessed

Rōvn is *not* a staffing agency. No placement, success, or commission fees — ever. Doctrine, receipts, and audit chain are included at every stage.

Pricing earned through pilot data — established with you at paid-pilot kickoff. Procurement-friendly templates at each stage.

DESIGN PARTNER PILOT

One quarter. *Free*. Your roster. Our build.

What we ask from you

- **One champion** — a credentialing director or CNO who is the daily user.
- **One BAA** — signed before any PHI moves. We bring the template.
- **Your roster, imported the day the BAA is signed** — production endpoint live as of 2026-05-25. Up to 50 providers.
- **30 minutes weekly for 12 weeks** — onboarding, design review, sharpening.
- **Honest feedback** — what works, what doesn't. We rebuild on it.

What you get

- **The full platform** — Readiness, Sources, Tracer — for your roster.
- **Two source adapters wired live** — typically Nursys + your payer of choice.
- **JCAHO + CMS evidence packs** — built once, exportable forever.
- **Direct line to the founder** — Slack channel, 4-hour response.
- **Earned pricing** — paid-pilot terms set with you, based on your data.
- **First customer logo rights** — featured (with permission) on launch.

Cohort size: 5 design partners total for the 2026 Q3 launch cohort. Selecting now. **The product is already running in production** — backend, audit chain, and import endpoints all live as of 2026-05-25. Send the roster Friday, sign the BAA, live by Monday.

One quarter of your time, in exchange for being first.

IF THIS IS THE SEASON

Let's see if your roster *can answer the six* by Friday.

30-minute call. Your screen, your roster, your committee's pain. We show what changes by the second week. No deck, no spreadsheet, no slides.

"The right credentialing tool is the one your credentialing director still wants to open at 2:30 in the afternoon."
